PHYTOLIQUID LINE

Your daily
wellness syrup

PHYTOLIQUID LINE

Phytoliquid is plant based collection of FOS Syrup. All products have undergone non-invasive extraction processes and without the use of high temperatures and pressures (gentle extraction).

Phytoliquid line is a synergical compound based on hydroglycerine extracts and FOS (Fructooligosaccharides). In particular, FOS are composed by soluble fibers that give to Phytoliquids a natural pleasant flavour without adding any sweeteners. The selected extracts are known in traditional medicine for their effectiveness and have been used to alleviate small ailments.

The line is composed of eight syrups to relieve different daily common diseases.

Choose the right syrup for your daily wellness!

FOS

Fructooligosaccharides (FOS) are oligosaccharides that occur naturally in plants and they are composed of linear chains of fructose units, linked by beta (2-1) bonds. The number of fructose units ranges from 2 to 60 and often terminate in a glucose unit. Dietary FOS are not hydrolyzed by small intestinal glycosidases, but they are metabolized by the intestinal microflora to form short-chain carboxylic acids, L-lactate, CO(2), hydrogen and other metabolites.

FOS are also considered as soluble dietary fiber with a prebiotic effect and some other important benefits such as improving mineral absorption, decrease serum cholesterol, triacylglycerols and phospholipids.

Currently FOS are increasingly included in food products and infant formulas due to their prebiotic effect stimulate the growth of nonpathogenic intestinal microflora.

TECHNICAL USAGE

The Phytoliquid line is a ready-to-use formula, suitable for children and adult people and specifically studied for different therapeutic areas. All the formulations can be customized adding vitamins and minerals or changing botanicals.

Ask to our team for a tailor-made formulation!
